

Welded Gutter Corner:

- Zinc

Deep-drawn Gutter Corner:

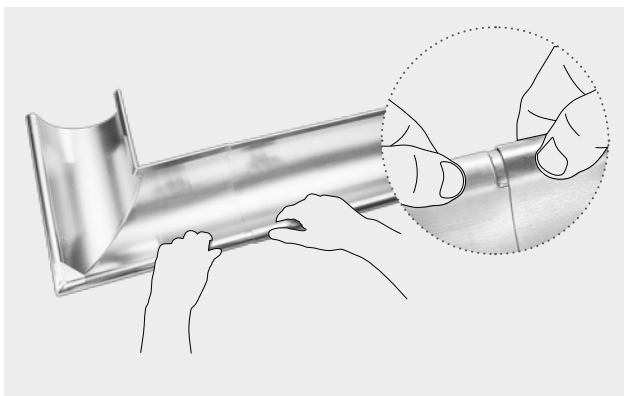

- Zinc
- Pre-weathered quartz zinc
- Copper
- Galvanized steel
- Testa di Moro
- UGINOX Patina K41
- UGINOX Top 304
- Aluminum

THE GUTTER CORNERS

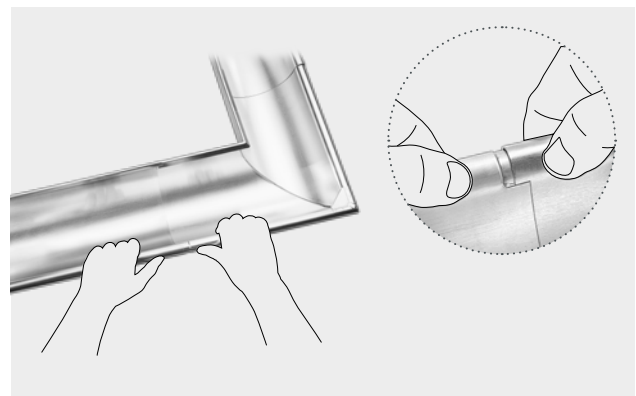

The GRÖMO gutter corners are functional masterpieces. They relieve the craft workers' work to an enormous extent and make laborious screwing unnecessary. Because thanks to the recessed bead with mounting aid, the gutter corner can be easily plugged in.

The precise angle design of the welded gutter corner guarantees perfect accuracy of fit and the circumferential fold prevents any overflow from occurring. The thickness of the material is consistent throughout and keeps the gutter corner sturdy, yet flexible. The shapely miter joint allows for a precise angle guide.

Easy for one side

In order to divert rainwater perfectly through the roof gutter in the direction of flow, the gutter corner is pushed under the gutter on one side by inserted the corner's recessed bead into the gutter bead. The slot can be ignored for this.

Easy for the other side

On the other side, the gutter is pushed under the gutter corner by inserted the gutter bead into the insertion slot of the recessed corner bead.
