THE GUTTER CORNER

The GRÖMO gutter corner is a functional masterpiece. It relieves the craft workers' work to an enormous extent and makes laborious screwing in unnecessary. Because thanks to the recessed bead with mounting aid, the gutter corner can be easily plugged in.

Easy for one side

In order to divert rainwater perfectly through the roof gutter in the direction of flow, the gutter corner is pushed under the gutter on one side by inserted the corner's recessed bead into the gutter bead. The slot can be ignored for this.

Easy for the other side

On the other side, the gutter is pushed under the gutter corner by inserted the gutter bead into the insertion slot of the recessed corner bead.
